

# Obtain Additional Value From Your Fisher® Control Valves and Accessories by Recycling

- Got a bone yard full of control valves taking up valuable space?
- Planning an modernization or upgrade project that will leave you with a wealth of replaced process equipment?
- Instrument & Valve Services can give your control valve bone yard greater end of life residual value using our Fisher® Core Recycling Program.

## Core Reclamation

Emerson's Instrument & Valve Services-based Fisher Core Recycling Program offers a simple answer to help you clean out your control valve bone yard while you receive additional end of life residual value from your Fisher equipment.

We've implemented a zero-waste initiative which maximizes the value of your Fisher valves and accessories while minimizing your overall environmental footprint.

At no cost to you, we will deliver a Fisher Core Recycling bin where your maintenance department can place Fisher® and Rosemount® equipment replaced through maintenance, upgrades, modernizations, or turnarounds. We do the rest...we even cover freight charges and provide prompt payment for your returned cores, along with an itemized transaction report. Bin pickups can be completed upon request by calling [1-800-654-7768](tel:1-800-654-7768).

## Reduce Waste, Realize Savings

Instrument & Valve Services will pick up your valve and instrument cores to prevent waste of potentially useful materials, while paying you top dollar for your used Fisher equipment. The Fisher Core Recycling Program yields more revenue than traditional scrapping to help you realize greater end of life residual value on your investment. The hassle free program includes providing market scrap values for any non-Fisher equipment placed in the bin to make your recycling process seamless. For more information, contact Emerson's local business partner in your area or call [1-800-654-7768](tel:1-800-654-7768).

In keeping with the Fisher Core Recycling Program, each valve core recycled is closely reviewed against stringent Fisher criteria for remanufacturability, to keep them out of landfills and give them a second life. For those Fisher valve cores that meet the standards. They are sent to our ENCORE™ facility located in Gonzales, Louisiana to be disassembled in preparation for remanufacturing.

Remanufactured units from our ENCORE facility are rebuilt to documented Fisher control valve specifications, and fully tested before they receive their Fisher Certified Repair badging.

Our rigorous Certified Repair process guarantees each remanufactured Fisher valve meets original equipment manufacturer (OEM) specifications through use of quality control protocols that adhere to Fisher product and ASME B16.34 standards.

Every recycled and refurbished Fisher product is remanufactured to:

- Deliver OEM quality performance for process control and safety management required by OSHA 1910.119 specifications; and
- Include authorized FM/CSA approval marks for hazardous area applications
