#### Introduction

This installation guide provides instructions for installation, startup, and adjustment of the Types 161 and 161M pilot regulators.

### P.E.D. Categories

This product may be used as a safety accessory with pressure equipment in the following Pressure Equipment Directive 97/23/EC categories. It may also be used outside of the Pressure Equipment Directive using sound engineering practice (SEP) per table below.

PRODUCT SIZE	CATEGORIES
1/4 NPT	SEP

## **Specifications**

Maximum Inlet Pressures(1)

Aluminum Body: 27,6 bar (400 psig) Stainless Steel Body: 103 bar (1500 psig)

Maximum Outlet Pressures(1)

Aluminum Body: 22,7 bar (330 psig) Stainless Steel Body: 51,7 bar (750 psig)(2)

#### **Outlet Pressure Ranges**

0,3 to 1,0 bar (5 to 15 psig), 0,7 to 8,6 bar (10 to 125 psig), 8,3 to 20,7 bar (120 to 300 psig), and 17,2 to 41,4 bar (250 to 600 psig)<sup>(3)</sup>

Temperature Capabilities<sup>(1)</sup>

Nitrile (NBR)/Neoprene (CR): -40° to 66°C

(-40° to 150°F)

Fluorocarbon (FKM): -18° to 149°C (0° to 300°F)

#### Installation

## **WARNING**

Only qualified personnel should install or service a regulator. Regulators should be installed, operated, and maintained in accordance with international and applicable codes and regulations, and Emerson Process

Management Regulator Technologies, Inc. instructions.

If the regulator vents fluid or a leak develops in the system, it indicates that service is required. Failure to take the regulator out of service immediately may create a hazardous condition.

Personal injury, equipment damage, or leakage due to escaping fluid or bursting of pressure-containing parts may result if this regulator is overpressured or is installed where service conditions could exceed the limits given in the Specifications section, or where conditions exceed any ratings of the adjacent piping or piping connections.

To avoid such injury or damage, provide pressure-relieving or pressurelimiting devices (as required by the appropriate code, regulation, or standard) to prevent service conditions from exceeding limits.

Additionally, physical damage to the regulator could result in personal injury and property damage due to escaping fluid. To avoid such injury and damage, install the regulator in a safe location.

Clean out all pipelines before installation of the regulator and check to be sure the regulator has not been damaged or has collected foreign material during shipping. For NPT bodies, apply pipe compound to the external pipe threads. For flanged bodies, use suitable line gaskets, and approved piping and bolting practices. Install the regulator in any position desired, unless otherwise specified, but be sure flow through the body is in the direction indicated by the arrow on the body.

#### Note

It is important that the regulator be installed so that the vent hole in the spring case is unobstructed at all times. For outdoor installations, the

- The pressure/temperature limits in this installation guide and any applicable standard or code limitation should not be exceeded.
  Type 161M monitor pilot maximum outlet pressure is 103 bar (1500 psig).
- 3. 17,2 to 41,4 bar (250 to 600 psig) outlet pressure range is only available for stainless steel bodies.

# Types 161 and 161M

regulator should be located away from vehicular traffic and positioned so that water, ice, and other foreign materials cannot enter the spring case through the vent. Avoid placing the regulator beneath eaves or downspouts, and be sure it is above the probable snow level.

### **Overpressure Protection**

The recommended pressure limitations are stamped on the regulator nameplate. Some type of overpressure protection is needed if the actual inlet pressure exceeds the maximum operating outlet pressure rating. Overpressure protection should also be provided if the regulator inlet pressure is greater than the safe working pressure of the downstream equipment.

Regulator operation below the maximum pressure limitations does not preclude the possibility of damage from external sources or debris in the line. The regulator should be inspected for damage after any overpressure condition.

### **Startup**

The regulator is factory set at approximately the midpoint of the spring range or the pressure requested, so an initial adjustment may be required to give the desired results. With proper installation completed and relief valves properly adjusted, slowly open the upstream and downstream shutoff valves.

### Adjustment

To change the outlet pressure, remove the closing cap or loosen the locknut and turn the adjusting screw clockwise to increase outlet pressure or counterclockwise to decrease pressure. Monitor the outlet pressure with a test gauge during the adjustment. Replace the closing cap or tighten the locknut to maintain the desired setting.

## **Taking Out of Service (Shutdown)**

To avoid personal injury resulting from sudden release of pressure, isolate the regulator from all pressure before attempting disassembly.

#### **Parts List**

#### Key Description

- 1 Body Assembly
- 2 Spring Case
- 3 Body Plug
- 4 Valve Plug
- 7 Diaphragm Assembly
- 8 Upper Spring Seat
- 9 Spring
- 10 Diaphragm Limiter
- 11 Adjusting Screw
- 13 Machine Screw
- 14 Pipe Plug (Type 161 Only)
- 15 O-ring
- 16 Closing Cap
- 17 Gasket
- 18 Vent
- 19 Solid Stem Guide Assembly
- 22 O-ring
- 23 O-ring
