

Get the Most from Your Smart Wireless Investment with SmartStart™ Services

- Maximize the benefits of Smart Wireless devices and networks
- Ensure fast, accurate installation and commissioning
- Empower staff with on-the-job training
- Leverage wireless to build life cycle success

Realize the benefits of your wireless technology investment with SmartStart Services.

Investing in Wireless

You deserve the maximum value from your Smart Wireless devices and networks. To get the correct layout, installation, and commissioning of your wireless network, choose Emerson's SmartStart Services.

SmartStart Services offer expert assistance with your Smart Wireless network layout using the AMS® Wireless SNAP-ON™ application. The AMS Wireless SNAP-ON validates your network to best practice guidelines and

ensures robust network communication, enabling you to reliably gather data from your wireless devices.

Once the network layout is complete, we'll install and configure the Smart Wireless Gateway, making sure it is performing at its best. We will also assign network addresses and verify the devices' readability at the interface or router to make integration into the control system or PLC a simple one-step process, increasing your plant's overall efficiency.

In addition, a complete assessment of your transmitters will include:

- Checking the process connections to ensure accurate mechanical installation
- Determining configuration and health
- Confirming WirelessHART™ connections
- Performing a communication check

Onsite Training

Your staff can observe our experts' work during startup. Once the startup is complete, they will receive basic instruction on Smart Wireless network fundamentals in a group setting. This on-the-job training in essential installation, operation, and troubleshooting will help your team understand how to use the equipment correctly, perform routine maintenance, and diagnose and resolve potential problems.

Onsite training gives your staff the fundamentals on Smart Wireless network functionality.

Additionally, the SmartStart Services technician will make sure your Smart Wireless network is reading properly, communicating to the Smart Wireless Gateway, and recording

in your control system or PLC before leaving the site. After installation, we will periodically contact you to make sure your Smart Wireless network is performing optimally.

For more information or to schedule service, please call your local Emerson Process Management sales representative or the North American Response Center at 1-800-654-7768.
